## DETAILED ACTION

### *Election/Restrictions*

1. Claims 4 and 7 withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected, respectively, a species and invention, there being no allowable generic or linking claims. Election was made **without** traverse in the reply filed on December 12, 2008.
2. Applicant's election without traverse of Group A, claims 1-6 and acidic whipping cream that read on claims 1-3 and 5-6, in the reply filed on December 12, 2008 is acknowledged.

### *Claim Rejections - 35 USC § 102*

3. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

4. **Claims 1-2 and 5-6** are rejected under 35 U.S.C. 102(b) as being anticipated by

**Blake et al. US Patent 4368211.**

- a. Referring to claims 1-3 and 5-6, Blake disclose an acidic whipping cream, made of soluble soybean, as described below: (Blake; column 5, line 39-57)

Whipping Agent

The present dessert compositions also essentially contain from about 0.3 to 1.5 of

an acid-stable whipping agent. Better results are obtained when the present compositions contain from about 0.4 to 0.8 of the whipping agent. By "acid-stable" it is meant herein that the presently employable whipping agents be able to aerate the present dessert compositions which have a pH ranging from about 2.5 to 5.5 to densities of between about 0.2 to 0.95 g./cc. when the whipping agent is present within the above specified range.

Whipping agents are well known in the food art and selection of suitable materials for use herein as the acid-stable whipping agent will pose no problem to the skilled artisan. Suitable materials can be derived as protein hydrolyzates from, for example, vegetable proteins. The protein hydrolyzates employed herein are water soluble (i.e., soluble at least to about 20% by weight at 25.degree. C. throughout the pH range of about 2.0 to 10.0).

- b. Referring to claim 2, Blake disclose a cream further comprising acidic taste substance (Blake; column 7, line 45-63).
